PROFESSIONAL SUMMARY

Entry-level IT support and network support candidate currently working toward CompTIA A+, with hands-on experience in Windows installation, PC hardware, basic networking, Linux, Proxmox VE virtualisation, SMB file services and remote-access tools. Maintain a personal homelab for self-hosting, DNS filtering, monitoring and troubleshooting, with a strong interest in Help Desk, NOC, systems and networking roles.

TECHNICAL SKILLS

Windows & Support: Windows installation/reinstallation, bootable media, software installation, basic driver/application troubleshooting

Networking: Static IPv4 configuration, DNS/DHCP fundamentals, router/Wi-Fi configuration, access points, basic port forwarding, ping and ipconfig, and connectivity troubleshooting

Linux & Virtualisation: Basic Debian/Ubuntu/CachyOS command line and SSH; Proxmox VE VM creation, ISO deployment, basic storage and LXC use

PC Hardware: RAM, CPU, CPU cooler, GPU, NIC and PSU removal/reseating or installation; basic hardware fault diagnosis

File & Remote Access: Debian SMB network shares; RDP, TeamViewer, AnyDesk and SSH

Productivity: Microsoft Word and Excel; basic Microsoft Access; basic GitHub web-interface use

CERTIFICATIONS & TRAINING

CompTIA A+ Core 1 & Core 2 | In progress

Technical Support Fundamentals - Google / Coursera | Completed

Credential: coursera.org/account/accomplishments/verify/6BEM7CPUMXZ6

PC Hardware Professional - Management and Strategy Institute (MSI) | Completed 2021

TECHNICAL PROJECTS

Personal Proxmox VE Homelab | [GitHub repository](#)

- Built and maintain a Proxmox VE learning environment on an Intel Core i7-10700 system with approximately 32 GB RAM, hosting VMs and containers for DNS filtering, file sharing, monitoring, home automation, media and network testing.
- Create VMs, upload ISOs, perform basic storage configuration and use the lab to test changes, troubleshoot issues and learn new technologies.

Home Network, DNS & File Services

- Configured static IPs, router DNS, basic port forwarding and two spare routers as wireless access points; deployed Pi-hole and previously used it as network-wide DNS.
- Configured a Debian SMB server with approximately 4 TB storage and authenticated shares for media, shared files, downloads and backups; troubleshoot Windows SMB connectivity using guided research.
- Use OPNsense for learning/testing in Proxmox and previously used pfSense as a home network gateway.

Windows & PC Hardware Troubleshooting

- Diagnosed and resolved a desktop boot loop by researching motherboard beep codes, isolating likely RAM/CPU causes, reseating hardware and clearing CMOS.
- Repeatedly installed Windows from USB/external SSD media and performed hands-on component replacement, reseating and PSU upgrades.

Home Assistant Smart-Home Lab

- Configured Home Assistant for approximately 10-20 smart devices, created GUI-based automations and experimented with integrations including LocalTuya.

EDUCATION

Grade 12 / Matric - 2025 | Eye of the Tiger Homeschooling, Pretoria | Relevant subject: Computer Applications Technology (CAT)

ADDITIONAL INFORMATION

Languages: English and Afrikaans | Availability: By arrangement | Open to remote, onsite or hybrid roles in/around Pretoria
